*This list is not exhaustive or final and will continue to be updated and revised as we collect information about specific sites. This list focuses on sites that are permitted under RCRA (the Resource Conservation Recovery Act). There are countless non-RCRA sites across the U.S. and its territories that conduct open air burning and detonation, including live-fire ranges, training areas, water ranges, removal actions under CERCLA, research and development sites, time-critical actions and many more.*
