

DNT = Dinitrotoluene (explosive propellant constituent)
(value) = WI Groundwater Enforcement Standard in ug/l based on risk to human health, with the exception of Sulfate which is based on smell/taste rather than health.
ug/l = micrograms per liter or parts per billion

This map was compiled by Citizens for Safe Water Around Badger (CSWAB) for educational purposes using data published by the U.S. Army. Test results on this map are for groundwater monitoring wells unless otherwise noted. Not all wells shown were tested, and not all exceedances are shown.

Letter designations on well names indicate relative well depths. Progression from "A" to "E" indicates increasing depth, with "A" wells being the shallowest.

Groundwater Exceedance Summary

Badger Army Ammunition Plant
April - May, 2018
